Recommendation on countercyclical capital buffer

On a quarterly basis, the Financial Stability Council shall submit recommendations to the Financial Supervisory Authority concerning the value of the countercyclical capital buffer pursuant to Article 86(d), Paragraph 1 of the Act on Financial Undertakings, no. 161/2002. In particular, the Council bases its recommendations on recommendations and analysis from the Systemic Risk Committee in determining the value of the countercyclical capital buffer; cf. the Act on a Financial Stability Council, no. 66/2014.

The main purpose of the countercyclical capital buffer is to enhance financial system resilience against potential losses following excessive debt accumulation and build-up of cyclical systemic risk. The buffer may be built up when a comprehensive assessment indicates that imbalances in the financial system are accumulating. The buffer requirement is reduced or lifted during a concurrent downward financial and business cycle so as to enhance financial institutions’ ability to maintain a sustainable supply of credit.

With reference to the analysis conducted by the Systemic Risk Committee, the Financial Stability Council recommends to the Financial Supervisory Authority that the countercyclical capital buffer be held unchanged. Household and corporate debt growth has been in excess of economic growth over the recent term. Although the economy is now slowing down, debt impairment is still low. There is uncertainty about future developments. Forthcoming recommendations on the countercyclical capital buffer will take note of developments in cyclical systemic risk.
Appendix to recommendation concerning countercyclical capital buffer

This recommendation is based on the Financial Stability Council’s general guidelines of the application of the countercyclical capital buffer. In accordance with official financial stability policy, the Financial Stability Council shall regularly disclose which indicators it takes into particular consideration in analysing systemic risk. Below are the indicators considered most important in the assessment of the countercyclical capital buffer at the Financial Stability Council meeting of 26 September 2019.

### The credit-to-GDP gap

![Credit-to-GDP gap graph](graph1)

- **Credit-to-GDP gap (r. scale)**
- **Credit-to-GDP ratio (l. scale)**

Total credit to households and firms in relation to GDP. The trend component is obtained with a one-sided HP-filter with λ=400,000. The 9% threshold value comes from Laina, Nyholm & Sarlin (2015).

### The buffer guide

![Buffer guide graph](graph2)

- **Credit-to-GDP gap (r. scale)**
- **Buffer guide (l. scale)**

The buffer guide is a simple function of the credit-to-GDP gap, which is the deviation of the credit-to-GDP ratio from its long term trend.
